

## What Are Our Measurements?

1. Measure the height, head size, and foot size of each person in your small group. Record the data in the table below.

Name	Height	Head Size	Foot Size

2. Using the data from the big table for the whole class, find:

The average height of the group      \_\_\_\_\_

The average head size      \_\_\_\_\_

The average foot size      \_\_\_\_\_

3. Which average did you use: mean, median, or mode?

Why did you use that form of the average?

4. Use a piece graph of paper in order to do a graph of one of the sets of information.

5. Write one or two sentences that describe our class in relationship to the information on your graph.
