## Paper Folding Geometry

Activity 6. A $60^{\circ}$ angle
On a rectangular piece of paper $A B C D$ fold the line that is parallel to two borders and is equidistant from them. You can do this by overlapping AC on top of BD. Open the piece of paper.
A

C
D
B

Fold vertex $A$ onto the median so that the resulting crease $G B$ passes through $B$.

Denote by $J$ the position of $A$ on EF. Trace the segment JB. Provide convincing evidence or prove that angle $A B J$ is $60^{\circ}$
