

Bringing Mathematics Home - 3

Money Activities

Try some of the activities from Session 3 with your children.

With younger children:

Do some equal sharing with money. For instance, take out \$20 dollars and have them share it 4 ways. Ask them how they might record what they have done and observe their thinking process about the problem. They might draw a picture to record the problem, or use numbers or tally marks. Bring in some of their work to share.

With older children:

Do the same problem that we did in Session 3. Be ready to share their thoughts about it with the class.

Challenge:

For children that are ready for a challenge:

Do the Division Principles handout with your children and bring in their work.
