

## Measuring Angles with a Protractor

### Activity 3. Measuring angles with the scale that goes right to left

The following angles are easier to measure if we make the  $0^\circ$  mark on the right of the protractor coincide with the horizontal leg of the angle. Notice the scale going from  $0^\circ$  on the right to  $90^\circ$  on the top, and then continuing to  $180^\circ$  on the left. If you are measuring an angle smaller than a right angle, the measure should be less than  $90^\circ$ . If you are measuring an angle bigger than a right angle, then you should get a measure bigger than  $90^\circ$ .
